# Integrated Development Environment (IDE)

The screenshot displays the Eclipse IDE interface. The top menu bar includes File, Edit, Navigate, Search, Project, XML, Run, Window, and Help. The toolbar contains various icons for file operations and development tools. The Project Explorer on the left shows a tree view of the project structure, with the file `isaacs-komet-compendium.xml` highlighted in red. The main editor window shows the XML content of this file, with a red arrow pointing to the text `<title>Principles</title>` and the label **DocBook XML file**. The XML content includes a title, a preface, and several include statements for external documents. The bottom of the IDE shows the Git interface, with the commit message field and the `Commit and Push...` button visible.

## About ISAAC's KOMET: (Multi-Module Documentation Project)

There is currently no description associated with this project.

### Project Modules

This project has declared the following modules:

Name	Description
<a href="#">ISAAC's KOMET: Appendicies</a>	Appendix material
<a href="#">ISAAC's KOMET: Bibliography database</a>	Bibliography content for ISSAC's KOMET
<a href="#">ISAAC's KOMET: CEM to CIMI transformation</a>	Clinical Element Model to Clinical Information Modling Initiative transformation
<a href="#">ISAAC's KOMET: Clinical observation modeling</a>	Clinical observation modeling sources for ISSAC's KOMET
<a href="#">ISAAC's KOMET: clinical data elements</a>	Clinical data elements for ISSAC's KOMET
<a href="#">ISAAC's KOMET: Design methods</a>	A description of design methods used by ISAAC's KOMET
<a href="#">ISAAC's KOMET: Document generation logging</a>	Log4j resources to enable logging of DocBook generation and rendering.
<a href="#">ISAAC's KOMET: Docbook customization</a>	Extensions to DocBook 5.1 to support structured requirements and editorial rules.
<a href="#">ISAAC's KOMET: Foundation</a>	Foundation documentation for ISAAC's KOMET
<a href="#">ISAAC's KOMET: Implementation</a>	Implementation documentation for ISAAC's KOMET tooling and prototypes
<a href="#">ISAAC's KOMET: Abridged</a>	ISAAC's KOMET, abridged edition, in html and pdf book form, assembled from dependencies.
<a href="#">ISAAC's KOMET: Compendium</a>	ISAAC's KOMET documentation, compendium edition, in html and pdf book form, assembled from dependencies.
<a href="#">ISAAC's KOMET: post-coordination implementation</a>	Post-coordination Implementation for ISSAC's KOMET

## ISAAC's Compendium

### Architecture Centric Knowledge Management

---

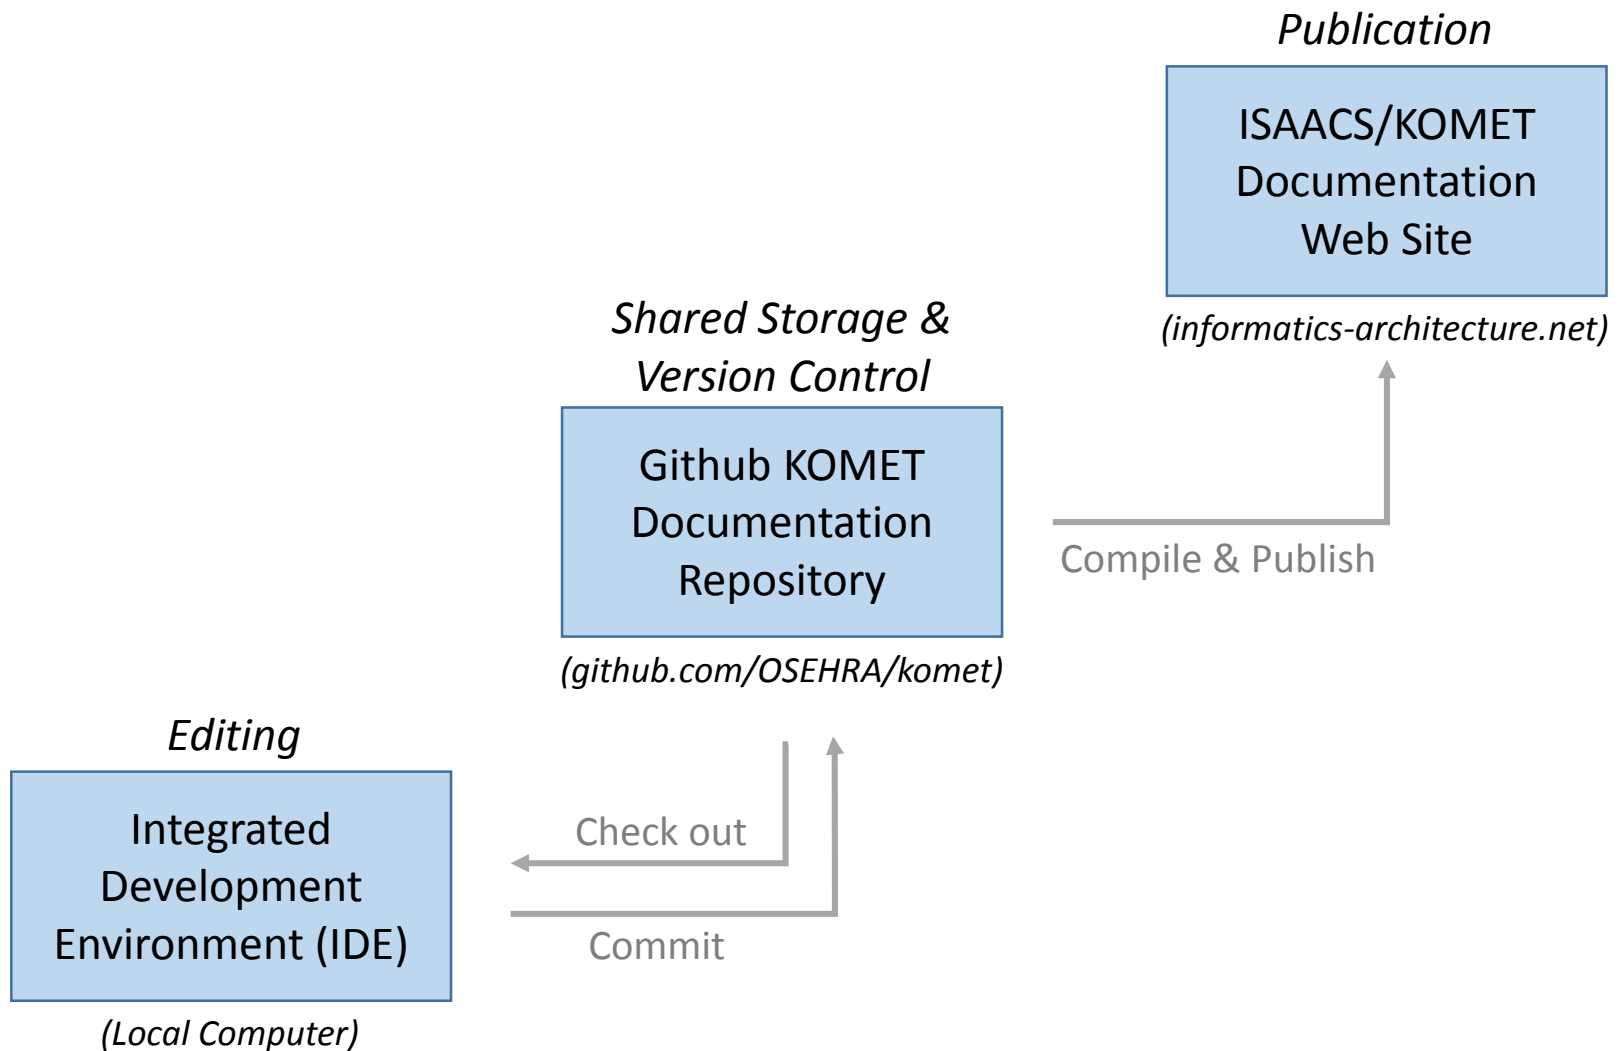

C/1680 V1, also called the Great Comet of 1680, Kirch's Comet, and Newton's Comet, has the distinction of being the first comet discovered by telescope. The orbit of C/1680 V1, fit to a parabola, as shown in Isaac Newton's *Principia*. Isaac Newton used observations of C/1680 V1 to test and verify Kepler's laws of planetary motion.

# Integrated Development Environment (IDE)

A screenshot of the Eclipse IDE interface. The main editor window displays a DocBook XML file named 'principles.xml'. The XML content includes a title 'Principles' and a section titled 'Principle 1: Separation of Concerns'. A red box highlights the XML code for the title and the first paragraph. The Project Explorer on the left shows the project structure, with 'principles.xml' highlighted. The bottom of the IDE shows the 'Commit Message' dialog box, indicating that there are no staged changes and the author is 'WSujanskyDesktop'.

## 7. Philosophiæ Logica Empirismus Principia Informatica

Philosophiæ Naturalis Principia Mathematica (pron. /fɪlɒsəfiːi nætʃərəlɪs prɪnʃɪpiː mæθɪmætɪkʃ/, Latin for Mathematical Principles of Natural Philosophy), [1] often referred to as simply the Principia, is a work in three books by Isaac Newton, in Latin, first published 5 July 1687.

mission: reliable data feeding a reliable model producing knowledge which drives quality healthcare delivery?

*Logical Empirismus*: A pursuit of knowledge purely through experience, especially by means of observation and sometimes by experimentation. (philosophy) A doctrine which holds that the only or, at least, the most reliable source of human knowledge is experience, especially perception by means of the physical senses. (Often contrasted with rationalism.)

<https://plato.stanford.edu/entries/rationalism-empiricism/>

The disagreement between rationalists and empiricists primarily concerns the question: How can we gain knowledge?

[empiricists] What held the group together was a common concern for scientific methodology and the important role that science could play in reshaping society. Within that scientific methodology the logical empiricists wanted to find a natural and important role for logic and mathematics and to find an understanding of philosophy according to which it was part of the scientific enterprise.

<https://plato.stanford.edu/entries/science-theory-observation/>

## 7. Philosophiæ Logica Empirismus Principia Informatica

Philosophiæ Naturalis Principia Mathematica (pron. /fɪlɪsəfi.i# næt#l#n#s#pi.# mæ# #mæt#k#/, Latin for Mathematical Principles of Natural Philosophy),[1] often referred to as simply the Principia, is a work in three books by Isaac Newton, in Latin, first published 5 July 1687.

mission: reliable data feeding a reliable model producing knowledge which drives quality healthcare delivery?

*Logical Empirismus*: A pursuit of knowledge purely through experience, especially by means of observation and sometimes by experimentation. (philosophy) A doctrine which holds that the only or, at least, the most reliable source of human knowledge is experience, especially perception by means of the physical senses. (Often contrasted with rationalism.)

<https://plato.stanford.edu/entries/rationalism-empiricism/>

The disagreement between rationalists and empiricists primarily concerns the question: How can we gain knowledge?

[empiricists] What held the group together was a common concern for scientific methodology and the important role that science could play in reshaping society. Within that scientific methodology the logical empiricists wanted to find a natural and important role for logic and mathematics and to find an understanding of philosophy according to which it was part of the scientific enterprise.

<https://plato.stanford.edu/entries/science-theory-observation/>

<https://docs.oracle.com/javaee/7/tutorial/websocket.htm>

Add a custom table of contents for principles:

<http://tdg.docbook.org/tdg/5.1/toc.html>

### 7.1. Principles

This section identifies the fundamental principles that will be applied when creating the models for Clinical Decision Support (CDS) Knowledge Artifacts ("KNARTs").

#### 7.1.1. Principle 1: Separation of Concerns

Definition: Separation of Concerns<sup>1</sup>

- [Principle 2: Immutability](#)
- [Principle 3: Phenomenon](#)
- [Principle 4: Measurement](#)
- [Principle 5: Composition Over Inheritance](#)
- [Principle 6: Analysis Normal Form Clinical Statements Represent the Minimum Disjoint Set](#)
- [Principle 7: Analysis Normal Form Classes Cleanly Separate Concerns](#)
- [Principle 8: Unique Concerns are Part of the ANF Topic](#)
- [Principle 9: Universal Concerns are Part of the ANF Circumstance](#)
- [Principle 10: Clinical Statement Model Stability](#)
- [Principle 11: Overall Model Simplicity](#)
- [Principle 12: Cohesion](#)
- [Principle 13: Reusability](#)
- [Principle 14: Assumption-free](#)
- [Principle 15: Design by Class Specialization and/or Composition](#)
- [Principle 16: No False Dichotomies](#)
- [Principle 17: Model Should Avoid Semantic Overloading](#)
- [Principle 18: Convention over Configuration](#)
- [Principle 19: Model Consistency](#)
- [Principle 20: Model Symmetry](#)

### [Concerns](#)

- [Concern 1: Phenomenon Measurement](#)
- [Concern 2: Identification of Equivalent Observation Results](#)
- [Concern 3: Identification of Logical Inconsistencies](#)

["Not Elsewhere Classified" Revisited](#)

# Integrated Development Environment (IDE)

The screenshot displays the Eclipse IDE interface. The title bar reads "VA\_DocBookWorkspace - Java EE - komet/principles/src/docbklx/principles.xml - Eclipse". The menu bar includes File, Edit, Navigate, Search, Project, XML, Run, Window, and Help. The toolbar contains various icons for file operations and development tasks. The Project Explorer on the left shows a project named "komet [komet develop ↑11]" with a tree structure including folders like "appendices", "bibliography-db", "cem-cimi", "clin-obs-modeling", "clinical-data-elements", "design", "doc-logging", "docbook-customization", "foundation", "implementation", "isaacs-komet-abridged", "isaacs-komet-compendium", "src", "target", "pom.xml", "kbs-future-architecture", "post-coordination-implementation", "principles", "quantifying-negation", and "main". The "principles" folder and its "pom.xml" file are circled in red. The main editor window shows the XML file "principles.xml" with the following content:

```
31 <section>
32 <title>Principles</title>
33 <para><?oxy_comment_start author="steph" timestamp="20170816T140623-0700" comment="My draft wording. It p
34 section identifies the fundamental principles that will be applied when creating the models
35 for Clinical Decision Support (CDS) Knowledge Artifacts ("KNARTs").<?oxy_comment_end?></para>
36 <section>
37 <title>Principle 1: Separation of Concerns</title>
38 <para> Definition: Separation of Concerns</footnote>
39 <para><?oxy_comment_start author="steph" timestamp="20170814T133939-0700" comment=" I can&apos;t reme
40
41 The link is: https://en.wikipedia.org/wiki/Separation\_of\_concerns?>wikipedia:
42 <?oxy_comment_end?>In <link xlink:href="https://en.wikipedia.org/wiki/Computer_science"
43 >computer science</link>, separation of concerns (SoC) is a design principle for
44 separating a <link xlink:href="https://en.wikipedia.org/wiki/Computer_program">computer
45 program</link> into distinct sections, such that each section addresses a separate
46 <link xlink:href="https://en.wikipedia.org/wiki/Concern_(computer_science)"
47 >concern</link>. A concern is a set of information that affects the code of a computer
48 program. A concern can be as general as the details of the hardware the code is being
49 optimized for, or as specific as the name of a class to instantiate. A program that
50 embodies SoC well is called a <link
51 xlink:href="https://en.wikipedia.org/wiki/Modular_programming"

```

The bottom of the IDE shows a commit dialog for the "komet [develop ↑11]" project. It includes fields for "Unstaged Changes (0)", "Staged Changes (0)", "Commit Message", "Author" (WSujanskyDesktop <WSujanskyDesktop@192.168.1.105>), and "Committer" (WSujanskyDesktop <WSujanskyDesktop@192.168.1.105>). Buttons for "Commit and Push..." and "Commit" are visible.

# Background and Terminology

The screenshot shows the Eclipse IDE interface. The Project Explorer on the left displays a project structure with several folders. The 'principles' folder and its subfolders 'src' and 'target' are circled in red. The 'target' folder contains a 'site' subfolder, which is also circled in red. The 'site' folder contains 'css', 'docbook', 'principles.fo', 'principles.html', and 'principles.pdf'. The main editor window shows the XML content of 'principles.xml', which includes a section titled 'Principles' and a 'Principle 1: Separation of Concerns' section. The code includes comments and links to Wikipedia articles. The bottom of the IDE shows the Git commit interface with a commit message field and buttons for 'Commit and Push...' and 'Commit'.

```
31 <section>

8		solor-references.xml	X			Currently almost no content; [Not sure what the intended content is here]
9		use-cases.xml	X			Lengthy and detailed descriptions of 9 clinical scenarios, including the clinical workflows. [But lacks I.T.-specific details to drive
10	bibliography-db	<a href="#">bibliography.xml</a>			X	Reference sources, presumably referred to (and linked to?) elsewhere in the repository (contains 50 entries)
11	cem-cimi	<a href="#">cem-cimi.xml</a>	X		X	Describes model and system for translating CEM models to CIMI models automatically
12		cem_model.xml				Part of the cem-cimi article; could probably be folded into a single .xml document
13		cimi_model.xml				Part of the cem-cimi article; could probably be folded into a single .xml document
14		conclusion.xml				Part of the cem-cimi article; could probably be folded into a single .xml document
15		standards.xml				Part of the cem-cimi article; could probably be folded into a single .xml document
16		transformation.xml				Part of the cem-cimi article; could probably be folded into a single .xml document
17	clinical-data-elements	<a href="#">clinical-data-elements-article.xml</a>			X	Describes data elements, as proposed for structured data capture (SDC), and their features/limitations
18	clin-obs-modeling	<a href="#">clin-obs-modeling-article.xml</a>			X	Describes the purpose and components of conceptual-level clinical observation models (like CIMI, CEM, OpenEHR, etc.)
19		<a href="#">clin-obs-modeling-chapter.xml</a>	X			Describes the purpose and components of conceptual-level clinical observation models (like CIMI, CEM, OpenEHR, etc.)
20	design	architecture-centric.xml	X			Contains a variety of concepts, some abstract, others quite specific [long-ish -- 20 pages -- section]. Sub-sections:
21		<a href="#">design.xml</a>			X	This .xml file <include>'s the other 3 in "design" folder
22		iterative-incremental.xml	X			No real content yet; just contains the empty sub-headers "Continuous delivery" and "Quality management"
23		requirements-driven.xml	X			Contains a variety of requirements for different layers of the architecture, some general, some specific
24	foundation	boundaries.xml	X			Chapter title: "Boundaries and Principles"; contains a potpourri of various, very abstract ideas regarding terminology, knowledge,
25		challenges.xml	X			Description of antipatterns that are pervasive in health IT systems, including: [Somewhat too abstract; needs more examples]
26		<a href="#">foundation.xml</a>			X	This .xml file <include>'s the other 6 in "foundation" folder (but not Pricipia)
27		life-critical.xml	X			Describes various quality and safety oriented characteristics of the artifact-development process that are needed in life-critical
28		menagerie.xml	X			A compendium of current terminology resources that are not integrated, PLUS a discussion of "Architectural Aspects"
29		operability.xml	X			Short section that introduces the terms "ISAAC" and "KOMET", and generally describes their goals to bring DevOps processes to
30		orchestra.xml	X			Chapter title: "The KOMET"; describes requirements for tools that "support a highly collaborative, integrated and layered
31		pricipia.xml				An abbreviated section; contains content regarding "Concerns", which also appears in principles/principles.xml [this section could
32	implementation	collaborating-guideline.xml				Currently empty; This section will include a guideline on how to collaborate and reference materials from GitHub READMEs, etc.
33		content.xml	X			Currently no content, just a title header
34		converting-msdoc-to-docbook.xml				Some of the same content is also in the last section of devops.xml
35		devops.xml	X			A set of low-level technical details about using Maven, Git, etc. Specifically describes how to incorporate DocBook content in KOMET
36		<a href="#">implementation.xml</a>			X	This .xml <include>'s devops, specifications, services, and tools from "implementation" folder
37		services.xml	X			Very short; just includes some links to information about Synthea, the Synthetic Patient Database from MITRE
38		specifications.xml	X			Seems to include brief technical specifications related to implementation of the architecture, currently comprising just the

# Recommendations

- Consider who the audience is for the compendium, abridged, and individual articles, and construct them accordingly
  - Is compendium needed if the repository web site exists?
- Add section identifiers within .xml documents so that sub-parts of these documents can be more selectively referenced by and inserted into other documents (i.e., compendium/abridged versions)
- Remove transitional text from the .xml documents themselves, and instead put that into containing documents, which will allow greater mixing and matching of content
- Create additional content to better put the existing DocBook chapters and sections into context and to better link them together

# Recommendations

- Chapter and section headings should be more descriptive of their content to help readers better navigate and understand the context of individual parts of the documents
  - E.g., “Principles for the Semantic Representation of Clinical Data” rather than “Principles”

Thank you
