Example Use Case: Care Management

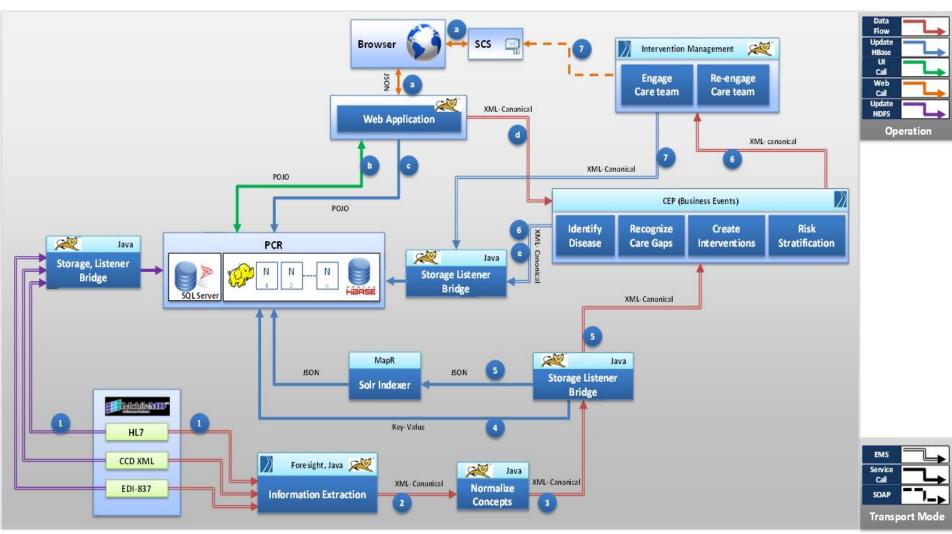

Functional Data Flow

Example Application – Data Flow

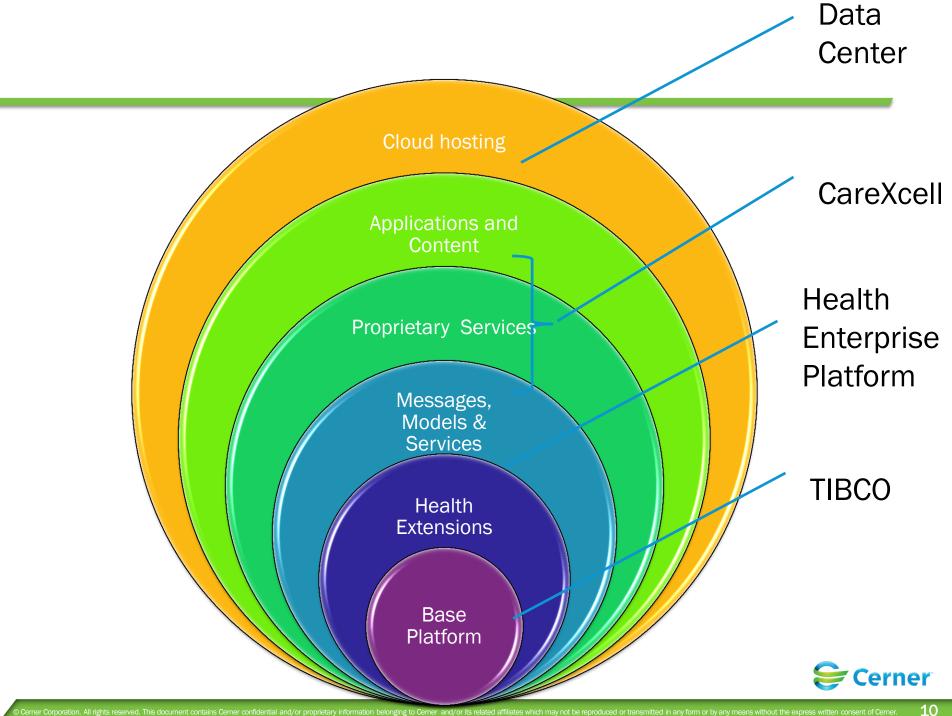

Application Example -- Operations

Op#	Operation
1	Publish raw message on the EMS to: Extract information Store in the raw data in PCR (HDFS)
2	Publish extracted structured information as a Canonical XM on the EMS
3	Publish semantic normalized structure information as a Canonical XM on the EMS
4	Store semantic normalized structure data into PCR (HBase)
5	Publish semantic normalized structure information for CEP Index semantic normalized structure data with Solr
6 e	Publish Identified patient intervention information to be assigned to a Care Team member Publish Identified patient intervention data to be saved in the PCR (HBase)
7	Publish assigned care team member intervention data to be saved in the PCR (HBase) Send secure message to patient for the patient interventions
а	HTTP REST call from UI to view Care Management functionality HTTP call from UI to view secure messages
b	Query/response for UI data from PCR (Hbase, Solr)
C	Update PCR(HBase) with updates from UI
d	Publish Message to EMS for UI updates on interventions

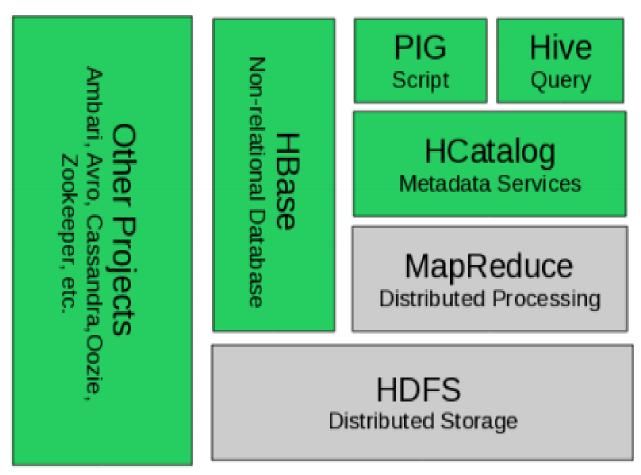

How to Proceed

"Hadoop" is Transitioning from This...

Source: "Apache Hadoop YARN: Moving beyond MapReduce and Batch Processing with Apache Hadoop 2," Murthy, Arun, Addison Wesley 2013

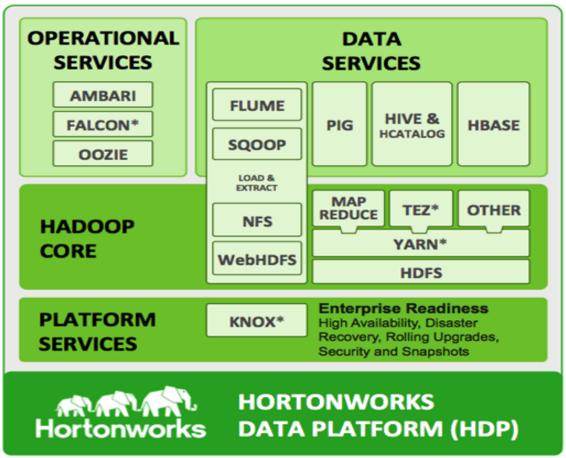

...To This

MapR Distribution for Apache Hadoop

 Complete Hadoop distribution Comprehensive management suite Industry-standard interfaces MapR Control System Combines open source packages with MapR Data Platform Enterprise-grade dependability Higher performance

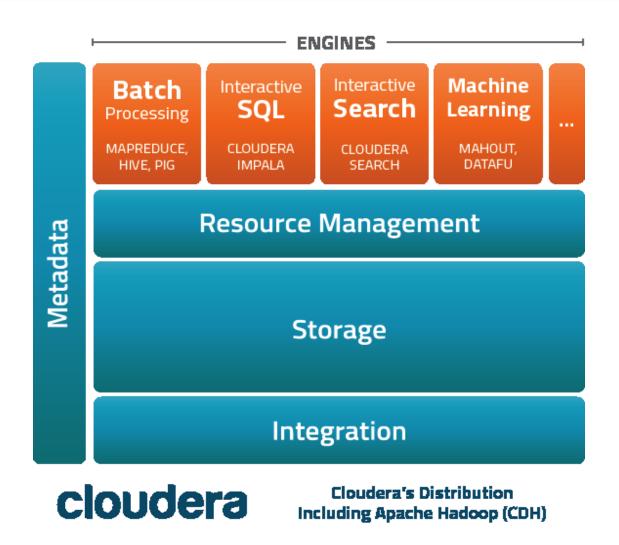

...And This

*included HDP 2.0

...And This
