Current CIMI Models

- miniCIMI
- Relied on a small, stable, reference model (BMM)
- Reference model was not expected to change... or very rarely... no churn expected in the BMM file
- Current Archetype Designers built around this

New CIMI Models

- Current “Reference” archetypes subsumed by the new BMM
- BMM files expected to change and grow
- Currently no support for BMM files in the ADL Designer or the CIMI Archetype Editor

Logical Modeling Toolkit (LOKI)

- Create high-level logical models
- Platform agnostic
- Output to CEML, BMM/ADL, UML, XML, FHIR Profile...

Logical Modeling

- High-level concept modeling
- Constraint based modeling
- Tightly bound to terminology
- No direct intermediate format other than output formats (users will never edit an LM text file)
